

**Team Members:** Logan Nhem, Adriana Reyes, Kaden Kirkland, Sean Chang

**Name of Project:** Munchies

**Dependencies:**

XCode 26.6

Swift 5.0

Firebase iOS SDK:

- FirebaseAuth
- Firestore
- FirebaseCore
- FirebaseStorage

**Special Instructions:**

- You have to open
- Set up LoginVC as initial VC
- Make sure the minimum IOS simulator build is 26
  - Ran on iPhone 17 Pro
- ar2002@gmail, 123456 to see profile with pre uploaded recipes associated with it

| Feature                     | Description                                                                                                                                                                                                                     | Who/Percentage worked on                  |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------|
| Sign up (functional)        | Creates user objects in users collection on Firestore. New users added into Firebase Authentication. <ul style="list-style-type: none"><li>• Logan made authentication</li><li>• Kaden created the 'users' collection</li></ul> | 98% Logan<br>2% Kaden linked to Firestore |
| Loading Screen, App logo    | Designed the app logo, made it appear like that on the home screen and launch screen with logo.                                                                                                                                 | 100% Logan                                |
| Log in (functional)         | Resets the profile page after authentication with user object on firestore to match userID that logged in.                                                                                                                      | 100% Logan                                |
| Navigation Bar (functional) | <ul style="list-style-type: none"><li>• Implemented the main tabbed control interface</li><li>• This enables seamless user navigation between the main feed, search, add recipe, grocery list, and</li></ul>                    | 100% Adriana                              |

|                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |                                                                                         |
